

Supplement 2. Nurse Satisfaction

This is what the nurse felt while injecting the patient intravenously. Please put a V in the box that matches your thoughts after intravenous injection.

	Question	Strongly Disagree	Disagree	Average	Agree	Strongly Agree
1	The use of M-TEE tourniquet was effective in relieving pain during intravenous injection in subjects.					
2	The use of the M-TEE tourniquet was helpful in administering intravenous fluids to participants.					
3	The use of the M-TEE tourniquet helped increase the participant's venous blood flow.					
4	The use of M-TEE tourniquet was helpful in identifying the subject's veins.					
5	I found the M-TEE tourniquet more convenient to use than the existing tourniquet.					
6	The M-TEE tourniquet caused less discomfort to the patient than the existing tourniquet.					
7	I feel positive about using the M-TEE tourniquet.					
8	I will recommend the use of M-TEE tourniquet to other nurses when administering intravenous injections.
